AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

- 1. (Previously Presented) A method of medium access control comprising:
 - receiving a first message including a first integer;
 - sending a second message including a second integer, the second message sent in response to the first message;
 - receiving, in response to the second message, a third message including data and a third integer, the third integer serving to authenticate the third message; and
 - sending, in response to the third message, a fourth message including a fourth integer, the fourth message serving to acknowledge receipt of the third message.
- (Original) The method of claim 1, further comprising:
 using, as the first, second, third, and fourth integers, the same value.
- 3. (Original) The method of claim 2, further comprising: using, as the same value, a random integer.
- 4. (Original) The method of claim 2, further comprising: using, as the same value, a pseudorandom integer.

- (Original) The method of claim 2, further comprising: using, as the same value, a time value.
- (Original) The method of claim 2, further comprising:
 using, as the same value, a time value based on a Global Positioning System
 (GPS).
- 7. (Original) The method of claim 1, further comprising:
 using, as the first integer, a nonce value, the nonce value being based on one or
 more of the following: a random integer, a pseudorandom integer, or a
 time value.
- 8. (Original) The method of claim 1, further comprising:
 using, as the first integer, a value that is a function of a nonce value.
- 9. (Original) The method of claim 1, wherein receiving the first message comprises: using, as the first message, a request to send message.
- 10. (Original) The method of claim 1, wherein receiving the second message comprises:

using, as the second message, a clear to send message.

11. (Original) The method of claim 1, further comprising:

using the first, second, third, and fourth messages as the medium access control of a wireless network.

- 12. (Original) The method of claim 1, further comprising:
 - using, as the first message, a request-to-send message, the request-to-send message providing media access control.
- 13. (Previously Presented) A method of medium access control in a wireless network comprising:
 - receiving a request to send message, the request to send message including a first integer;
 - sending, in response to the received request to send message, a clear to send message including the first integer and a second integer;
 - receiving, in response to the clear to send message, a data message including the second integer, the second integer serving to authenticate the data message; and
 - sending, in response to the received data message, an acknowledgement message including the first integer.
- 14. (Previously Presented) A system of medium access control in a wireless network comprising:
 - means for receiving a request to send message, the request to send message including a first integer;

Application No. 10/804,192 Attorney Docket No. 03-4041

means for sending, in response to the received request to send message, a clear to send message including the first integer and a second integer;

means for receiving, in response to the clear to send message, a data message including the second integer, the second integer serving to authenticate the data message; and

means for sending, in response to the received data message, an acknowledgement message including the first integer.

15. (Previously Presented) A system of medium access control comprising:

means for receiving a first message including a first integer;

means for sending a second message including a second integer, the second message sent in response to the first message;

means for receiving a third message, in response to the second message, including data and a third integer, the third integer serving to authenticate the third message; and

means for sending, in response to the third message, a fourth message including a fourth integer, the fourth message serving to acknowledge receipt of the third message.

16. (Previously Presented) A system for medium access control, the system comprising:

a processor; and

a memory,

wherein the processor and the memory are configured to perform a method comprising:

receiving a first message including a first integer;

sending a second message including a second integer, the second message sent in response to the first message;

receiving, in response to the second message, a third message including data and a third integer, the third integer serving to authenticate the third message; and

sending, in response to the third message, a fourth message including a fourth integer, the fourth message serving to acknowledge receipt of the third message.

- 17. (Original) The system of claim 16, further comprising:
 using, as the first, second, third, and fourth integers, the same value.
- 18. (Original) The system of claim 17, further comprising: using, as the same value, a random integer.
- 19. (Original) The system of claim 17, further comprising: using, as the same value, a pseudorandom integer.
- 20. (Original) The system of claim 17, further comprising: using, as the same value, a time value.

- 21. (Original) The system of claim 17, further comprising:
 using, as the same value, a time value based on a Global Positioning System
 (GPS).
- 22. (Original) The system of claim 16, further comprising: using, as the first integer, a nonce value, the nonce value being based on one or more of the following: a random integer, a pseudorandom integer, or a time value.
- 23. (Previously Presented) A system for medium access control in a wireless network, the system comprising:

a processor; and

a memory,

wherein the processor and the memory are configured to perform a method comprising:

receiving a request to send message, the request to send message including a first integer;

sending, in response to the received request to send message, a clear to send message including the first integer and a second integer;

receiving, in response to the clear to send message, a data message including the second integer, the second integer serving to authenticate the data message; and

sending, in response to the received data message, an acknowledgement message including the first integer.

24. (Currently Amended) A computer-readable storage medium containing instructions which, when executed on a data processor, cause the to configure a data processor to perform a method of medium access control, the method comprising:

receiving a first message including a first integer;

sending a second message including a second integer, the second message sent in response to the first message;

receiving, in response to the second message, a third message including data and a third integer, the third integer serving to authenticate the third message; and

sending, in response to the third message, a fourth message including a fourth integer, the fourth message serving to acknowledge receipt of the third message.

25. (Currently Amended) A computer-readable storage medium containing instructions which, when executed on a data processor, cause the to configure a data processor to perform a method of medium access control in a wireless network, the method comprising:

receiving a request to send message, the request to send message including a first integer;

Application No. 10/804,192 Attorney Docket No. 03-4041

sending, in response to the received request to send message, a clear to send message including the first integer and a second integer;

receiving, in response to the clear to send message, a data message including the second integer, the second integer serving to authenticate the data message; and

sending, in response to the received data message, an acknowledgement message including the first integer.
